

Summary

Senior software engineer with 7+ years building backend, frontend, mobile, and cloud products. Strongest paid experience is Python and Django. Also FastAPI, React, and Flutter. I own products end to end, care about production reliability, and treat UI/UX with the same attention as the API. I like shipping from idea to the end user, then improving from real feedback.

Experience

Londonist DMC

Istanbul, Türkiye

2024 – Present

- Senior Software Engineer
- Promoted after taking ownership of multiple production systems. Led work on the internal CRM, company website, and Flutter mobile apps.
 - Worked across backend, frontend, mobile, and infrastructure. Set up CI/CD, containerized services with Docker, deployed to production, and added Sentry.
 - Stack used: Django, Laravel, React, and Flutter.

- Backend Engineer
- 2021 – 2024
- Built and maintained the Student Portal and Partner Portal in Django for thousands of users.
 - Supported production deployments and day-to-day issues on those portals.

AGTEQ

Canada

2024 – 2026

- Senior Backend Engineer (Freelance, Part-time, Remote)
- Freelance part-time backend work for an AI platform in agriculture.
 - Built APIs with Django REST Framework.
 - Managed application servers on DigitalOcean.
 - Set up CI/CD with GitLab and Docker.
 - Worked with a remote engineering team on production code.

MehrTakhfif

Iran

2019 – 2021

- Backend Engineer
- Spin-off from G Corp. Marketplace for products and services. The company later shut down.
 - Designed and built the web app from scratch with Django, React, PostgreSQL, Redis, Celery, and Elasticsearch.
 - Added monitoring with Prometheus, Grafana, and Kibana. Used New Relic and Sentry for performance and errors.
 - Set up automation and CI/CD. Worked on database design, query optimization, and background job debugging.

G Corp

Iran

January 2016 – December 2021

- Co-founder and Backend Developer
- Co-founded a university engineering company with a friend and delivered client websites and APIs.
 - Completed 10+ client projects using PHP, WordPress, Python, Django, Flask, Scrapy, and Laravel.
 - Worked from planning to deployment, with attention to performance and security.
 - MehrTakhfif started here as the main product and later became a separate company.

Selected Project Experience

- Tamoom — Android productivity app inspired by Things 3. Custom UI, daily workflow, performance-focused. Play Store
- Mantar — Offline-first Android app for shared expenses. Built for groups who need the app without a live connection. Strong attention to UI and UX. Play Store
- NiliRazaghi — Photography portfolio focused on performance and media-heavy pages.
- Analytics Dashboard — Internal dashboard unifying Firebase, PostHog, and Google Play analytics.

Skills

- Backend: Python, Django, FastAPI, Django REST Framework
- Frontend: React, Next.js
- Mobile: Flutter
- Databases: PostgreSQL, Redis, Elasticsearch
- DevOps: Docker, CI/CD, GitLab CI, GitHub Actions, DigitalOcean
- Monitoring: Sentry, New Relic, Prometheus, Grafana
- Also used: Laravel, PHP, MySQL, Celery, AWS

Education

Ahrar Institute of Technology and Higher Education

Bachelor’s Degree, Computer Science · Rasht, Iran

September 2014 – July 2018
